

Procedure for the replacement flextor

1. Tools necessary

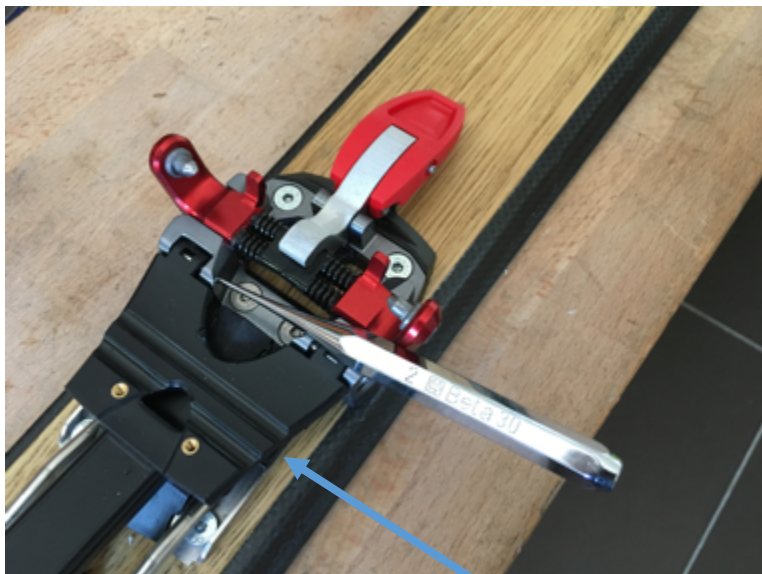

- 2 mm conic hunting pin
- A plier or crocodile clip
- A hammer or a plastic mallet

2. Operations

a) Extract the 2 pins

- Use the 2 mm conic hunting pin: place it into the 2,4 mm home inside the aluminium plate of the low tech.
- Kick the 2mm hunting pin with the hammer. Look at the pin out on the 2nd photo

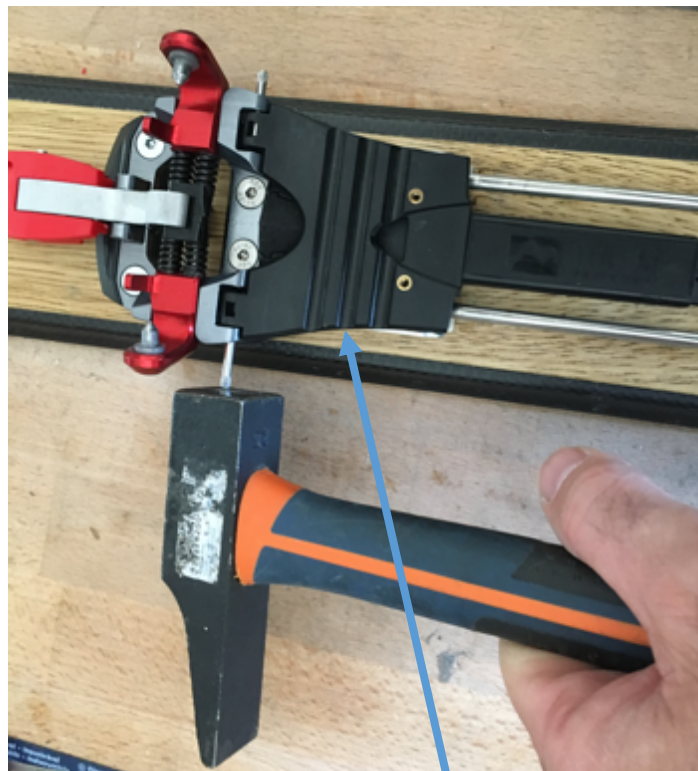

Note : the flextor is a small model (2 stripes) on this photo.

Extract the pin with the plier

b) Mounting of the flexor

- Engage the 2 knurled pin with the knurled part place outside.
- Place the flexor and be careful to introduce the pin inside the flexor
- Push the pin with the plastic mallet. You can-use the conic hunter if you want. Push completely the pins till they are completely inside the holes.

Note : On the photo the flexor is a Large model (3 stripes)
